From Pharmacies to EMS Partners: Complete DSCSA Compliance Throughout the Entire Healthcare System

Wood County Hospital (WCH)

“InfiniTrak’s solution is exactly what we are looking for to verify orders and easily document what is needed for DSCSA. Knowing their plan for the next 2 to 3 years ahead of time makes me more comfortable and feel less in the dark.”

– Todd Leopold,
Director of Pharmacy Operations

Challenge

With the U.S. FDA's Drug Supply Chain Security Act (DSCSA) requirement to track and trace items at the product and case level by 2023, those in the pharmaceutical industry are preparing their internal systems to meet compliance. This complex law brings significant workflow changes to the way most pharmacies currently operate.

As a hospital that services many local Emergency Medical Services, Wood County Hospital's (WCH's) main priority is the safety of their customers and community. However, DSCSA compliance was proving to be complicated, costly, and time consuming.

Solution

InfiniTrak offers the complete track-and-trace solution to DSCSA compliance requirements, centralizing and automating all the business requirements and processes required by the law.

By partnering with GS1 US® Solution Partner InfiniTrak, the Wood County Hospital was equipped to verify trading partners who were authorized and properly licensed to sell and trade pharmaceuticals. They were able to share track-and-trace transactional data including key GS1 identifiers with their trading partners and store that information with the promise of accessing it in the future. Lastly, WCH was able to inspect and report on any suspect or potentially counterfeit products and quickly communicate this information up and down their supply chain.

Benefits

- Improves inventory visibility by tracking all drug transactions in the supply chain, both incoming and outgoing.
- Prevents counterfeit drugs from entering throughout their supply chain, including EMS partner dispensing.
- Significantly reduces labor hours and human error by capturing lot numbers and expiration dates from 2D barcodes including GS1 DataMatrix barcodes.
- Automates many manual processes, including accepting and verifying product, identifying suspect products, and reporting and capturing serialized data.
- Offers complete cloud-based compliance through 2023 interoperability required for hospitals and dispensers with ROI functionality like recall management, expiration management, mobile scanning, controlled substance tracking, and advanced data analytics.
